Not only does it make our tasks faster and easier, but it also allows us to create completely new and interesting content that we never could have attempted with the use of a lesser tool. But if you're looking for such a tool, you need to be extremely careful, because some of them are extremely dangerous. These programs are ones that can completely destroy the original footage that you've been working on. Many times, the actual footage is useless when the interface messes up. This is why it's very important for you to be aware of some of the things to consider when selecting a video editor. Keep in mind that you're choosing not only a program that will allow you to edit your video, but also a program that will keep the original quality of your footage. Besides that, you need to make sure that the program you're selecting has a non-destructive editing workflow. A non-destructive editing workflow in other words is a process that allows you to take out selected clips or sections of a video without any loss in quality. So, how does the PFE work? The PFE is a free, non-destructive video editor that allows you to directly edit video directly from the Windows operating system. Instead of downloading an application and installing it, you can simply open the PFE and use it directly
