AWESOME TUTORIAL[url] Hong Kong New Year Eve Fireworks: From 2004, 2010, 2015, 2016, 2017.Massachusetts Institute of Technology (MIT) scientists have developed a new safe, "green" material that is five times stronger than carbon fiber and can be made in sheets that are far more flexible than most metal alloys. The potential uses for such a material are nearly limitless, but it could also pose a major challenge in its manufacture: it's very difficult to make. "This is a remarkable discovery, and it is the type of groundbreaking discovery
