MinaDite Features: • A virtual MIDI controller to which you will be able to send various MIDI messages • Very easy to use, no additional software required • Effects can be configured either via MIDI messages or via a dedicated control panel • A virtual keyboard you can send via MIDI messages so as to control all types of software • We included a compatible driver for Windows XP, Vista, Windows 7 and Windows 8 MinaDite Downloads: User Reviews: malikal 4/27/2013 12:21:12 pm I was afraid that I would have to spend a lot of time configuring it. It seemed a bit complex... but it's not as complicated as I expected. Once I have the settings for all the controls I was happy... I like the way it feels. And overall, I'm very satisfied. JosSeThePron 4/10/2012 11:26:12 pm The project was abandoned and it has been for a very long time, the author (Guy) has disappeared for some years. However I was able to update the software (v2.0) and I have added a lot of functions to make it a bit more professional and stable. Involved controls: Keys: 128, Model:, track memory, sequencer, pitch bend. Compatibility: Win XP, Win Vista, Win 7, Win 8 guypersad 5/6/2011 12:31:10 am this is awesome,,i have just started using it after buying it and its the most amazing work,,i played it on my laptop win XP and win 7 but its not working on windows 8 is there a way to make it work on that system??? This is a pretty cool MPC clone, and you can actually touch the screen and it responds immediately. The only thing I wish it had was a midi output, so I could send it out to other things like Ableton Live or other sequencer software. But otherwise it's an awesome little device. Oh, and the interface is a really nice one too. Definitely check this one out. auricliff 6/24/2010 2:25:31 am The MinaDite IS the one of the best virtual midi controller I ever used. I'm using it with some synthesizer in Ableton Live b7e8df5c8

MinaDite [Updated]

If you are new with MIDI and want to learn, start from creating your own effects or virtual set of effects. You may for example be interested in sending multiple notes with one touch. You may also want to record which you touch and send this MIDI information with the touch of your mouse. This product is for beginners, but not for those who are not familiar with MIDI and computers. The MinaDite is a new approach, designed to be controlled via a touchscreen or mouse, sending MIDI information via a USB host, which sends these MIDI messages via a serial port, which can be used to interface your computer with another computer, VJ, DJ, etc. The purpose of the MinaDite is to provide a virtual keyboard for use with any of the production software, without the need to purchase a real keyboard. With the MinaDite, the user will be able to control the effects that will be used. The user will be able to select the effect effects that will be used for an audio or MIDI input. Each effect will have a default value but each user can configure their own values for those effects. If you need to record the response of your virtual touch, the MinaDite will be able to record this information. All MIDI messages are generated by MinaDite when some user input is detected on the touch of the panel. However, the MIDI input is send and recorded by the USB host using the BPM value, which is freely customizable by the user. The MIDI messages recorded by the USB host are sent via serial to the host computer, which controls the all functions of the MinaDite. The USB host controls the MIDI messages sent by the MinaDite at the same time as the USB host controls the two push buttons on the MinaDite. When the MinaDite receive a control activation, it sends a command to the USB host, then the USB host executes the function. The MinaDite control activation is sent by the USB host, before the MIDI messages are sent to the MinaDite. When the user release his finger on the touch of the MinaDite, the USB host sends a command to the MinaDite to stop the control activation. MinaDite Features: The MinaDite is a USB host, connected directly to your computer via a USB cable. The
