I ignore other people, other species, the vast majority of the planet. It's become my default setting. I'm a geek, but not at the level where people get excited about me. I never got into video games or science fiction movies or TV. I never read books. I've been a fan of Star Trek since I was a kid, but I only started to watch the show regularly in the last few years. Q: Migrating from Windows to Ubuntu and C# to VB.Net? I'm in the middle of upgrading from Windows 7 (64-bit) to Ubuntu (64-bit) and was wondering what the easiest way was to migrate my .Net applications. Currently I have about 8 C# projects that are linked to the SVN source code and compile on Windows and then run them on Windows (with mono 2.8.1). Now, this is a great environment, but I'm thinking of moving to Ubuntu and using mono (which I've heard is pretty similar). Does anyone have any tips/suggestions on how I can do this?
A: If you compile your C# projects using the mono C# compiler, it will likely work just fine on Ubuntu. Note that Ubuntu comes with the .NET runtime, so your programs will run just as fast as they did before, but you'll have to use the native compiler to get C# code to run. You can install the native compiler using these instructions:
`sudo apt-get install mono-complete` After you install mono-complete, you should be able to compile your C# code using the following commands:
`mkdir /usr/local/bin`
`sudo apt-get install build-essential`
`cd /usr/local/bin`
`wget tar zxvf mon-2.8.1.tar.gz`
`cd mon-2.8.1/src`
`./configure --prefix=/usr/local`
`make`
`sudo make install` (credit to here) There is some additional information about compiling Mono on the Mono website. Here's a brief introduction to how the Mono runtime differs from the .NET runtime on Windows. Finding a mate is hard, but finding a master is even harder.
