Creature games Roblox is an online game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. Roblox is free to play, with in-game purchases available through a virtual currency called Robux. As of August 2020, Roblox had over 164 million monthly active users, including more than half of all American children under 16. Although Roblox has received generally positive reviews from critics, it has faced criticism for its moderation, microtransactions, and exploitative practices directed toward children. I don't want to spend a cent, and I tried many ways, but I did not find a free robux generator. A: It is not possible to get free robux on a Roblox account. Roblox blocks certain websites that try to trick users into thinking they're getting free robux, such as appunu. In fact, on most social apps, we normally see a warning when we try to use a robux generator, such as this one: Source: That being said, you can buy some robux. Q: TryParse not catching error in parameterized TryParse I can't figure out what's wrong with this method. It's supposed to take a string and check to make sure that the string is valid, and then either log the string to a console, or return -1. I can only get it to work if I set the decimal point to a decimal and don't let the user use a period to designate the decimal mark, but if I do that I get an error telling me that when I'm converting to a decimal the period isn't valid (which isn't true). Is there something in the method that's stopping it from catching the error in the first parameter? I'm stumped. internal static int TryParse(string format, string value, out DateTime result, char decimalMark, params char[] acceptablePatterns) { DateTime convertedDate; if (DateTime.TryParseExact(value, acceptablePatterns, CultureInfo.InvariantCulture, DateTimeStyles.None, out convertedDate)) { result = convertedDate; return 1; } result = default(DateTime); return 0; } A: The problem is in the fact that value parameter is passed by reference to the TryParse. On each call of the method, the value parameter will be changed, so it will not hold the previous value. Instead of Date
